

Graylock Digital — Realtor Landing Page

Build-Ready Scope, Copy Deck, and IDX/MLS Implementation Brief

Recommended route: /websites-for-realtors

Primary conversion: Book a Discovery Call

Primary audience: Individual real estate agents, agent teams, brokerages, and real estate professionals who need a credible, lead-generating website.

Primary offer: A free custom homepage demo, shown before the prospect pays anything.

Build model: Adapt the existing Graylock homepage’s proven conversion architecture. Do **not** redesign the global site or replace the existing homepage. Build a new audience-specific landing page using the same brand system, navigation shell, CTA behavior, footer, component styling, and mobile-first standards.

Positioning statement: Graylock builds custom real estate websites that help agents and brokerages look credible, get found locally, turn property search into conversations, and support IDX implementation when the client’s MLS and brokerage eligibility permit it.

1. Purpose, Guardrails, and Required Assumptions

This page must feel purpose-built for real estate professionals rather than like the generic Graylock homepage with the word “realtor” substituted into the copy. Every headline, proof point, pain point, visual, and CTA should reflect the buyer-and-seller journey: local search, property discovery, trust, listing credibility, seller leads, and direct contact with an agent.

The page is **not** an IDX provider landing page. It is a Graylock service page for custom real estate websites. Present IDX as an important capability inside a broader lead-generation system—not as the only reason to hire Graylock.

Use the term “**real estate agents, teams, and brokerages**” as the default audience label. Use **REALTOR®** only where the client has confirmed the audience is eligible to use that trademark properly. Do not use REALTOR® as a generic substitute for “agent.”

The hero visual has already been selected and should be used as the dedicated real estate device-background asset:

Asset	Required use	Placement and treatment
-------	--------------	-------------------------

hero_bg_willow_realty.png	Realtor landing-page hero background	Use behind the desktop hero content. It already contains the Willow Realty website in laptop and phone mockups, with a clear dark area on the left for copy. Do not place text, an additional image overlay, device frame, or dark gradient over the device side of this asset.
---------------------------	--------------------------------------	--

Non-negotiable IDX/MLS language rules

IDX access, eligible listing data, required disclosures, data fields, licensing terms, and approval workflow are controlled by the relevant local MLS and data provider—not by Graylock. NAR’s IDX policy permits participating MLS members to authorize limited display of other participants’ listings, subject to requirements and limitations; RESO also confirms that MLS data access and credentials are obtained through the local MLS after its data-use and licensing policies are satisfied. ¹ ²

Therefore, never claim “we can connect every MLS,” “approved by all MLSs,” “instant IDX,” or “we guarantee MLS approval.” Use the approved language in this brief:

Approved customer-facing language: “IDX property search, subject to your MLS and brokerage eligibility. We help coordinate the website side of the setup and guide you through the local MLS approval process.”

Do not place legal-sounding copy in the hero. Add the detailed qualification note only in the IDX section and FAQ.

2. Homepage Baseline: What to Keep, Replace, and Add

The current homepage has a strong lead-generation framework: a pain-led hero, credibility statistics, a three-card problem section, feature-led delivery section, demo-first process, testimonial, comparison table, pricing section, and closing CTA. Preserve that **sequence and conversion logic**. The work is to make every element specific to the real estate professional’s actual business model.

Current homepage element	Keep or change	Realtor landing-page action
Global header, logo, Call Now , primary CTA	Keep	Preserve desktop and mobile behavior. Change the primary header CTA label to Book a

		Realtor Website Call only on this page, while retaining the same <code>/get-started?industry=real-estate</code> destination.
Hero: generic service-business eyebrow, pain-led headline, device image	Replace content; retain structure	Use the real-estate hero copy and <code>hero_bg_willow_realty.png</code> . Keep the left-copy/right-device composition.
Four hero proof points	Replace	Change to real-estate-specific proof points: local visibility, property search, seller/buyer conversion, and guided MLS setup.
“Why Design Decides Everything” statistics	Keep with revised framing	Retain the existing visual statistics component and source treatment; revise the section heading/body so the relevance is credibility with buyers and sellers.
Three “problem” cards	Replace all copy and images	Use the three real-estate pain points in Section 5. Do not reuse generic service-business language.
“What We Deliver” feature grid	Replace all copy and image	Convert this to a real-estate lead-engine section: local credibility, IDX search, buyer/seller conversion paths, and local SEO.
Demo-first process	Keep concept; adjust process	Use the five-step realtor version, including an IDX/MLS readiness step.
Existing non-real-estate testimonial	Remove from this landing page	Do not use the petroleum testimonial here. Keep a prepared testimonial component but do not display invented text or generic quotes. Until the real estate testimonial is approved, replace the section with a portfolio/case-study bridge.
Traditional vs. Graylock comparison	Keep concept; revise language	Reframe against “template real estate sites and generic

		agency packages.” Include the customer’ s control and the free custom demo.
Pricing section	Keep structure; revise contextual copy	Maintain the existing published Graylock pricing and call-to-action. Do not invent an IDX price or claim that third-party IDX/data fees are included.
Closing CTA	Keep	Replace copy with realtor-specific reassurance and route to <code>/get-started?industry=real-estate</code> .
Footer	Keep	Preserve the global footer. Add a Real Estate Websites link only if this page will be part of the permanent service-page cluster.

3. Information Architecture

Build the page in this order. Use the current homepage’ s spacing rhythm, dark visual system, orange accent color, button styles, uppercase eyebrow styles, and responsive behavior. The new page should feel unmistakably Graylock, but the content should feel like it was written solely for an agent, team, or brokerage.

Order	Section	Purpose
1	Global header	Preserve brand recognition and put the booking action within immediate reach.
2	Realtor hero	Make the relevance obvious within seconds and show a concrete example of a premium real estate website.
3	Credibility / why design matters	Establish that a real estate website is a trust signal before it is a brochure.

4	Realtor website problems	Name the three specific ways ordinary sites cost agents leads and confidence.
5	What we build for real estate	Describe the four outcomes of a Graylock real estate site.
6	IDX + MLS setup guidance	Differentiate Graylock with a transparent explanation of property-search integration and the MLS workflow.
7	Demo-first process	Explain the low-risk path from discovery call to launch.
8	Proof bridge / future testimonial	Reserve space for the incoming real estate testimonial without presenting fabricated social proof.
9	Graylock comparison	Contrast Graylock with template platforms and slow, generic agencies.
10	Pricing bridge	Reiterate the demo-first offer and transparent ongoing model.
11	Closing CTA	Convert qualified visitors into discovery calls.
12	FAQ	Resolve IDX, MLS approval, timing, ownership, and fit questions before the visitor leaves.
13	Global footer	Preserve existing navigation, legal links, and phone CTA.

4. Section-by-Section Copy and Build Instructions

Section 1 — Global Header

Use the current global header component with the existing logo, page links, phone link, and orange booking button. Do not change the full site navigation. On this page only, change the orange header button label to:

Book a Realtor Website Call

The button must point to:

Plain Text

`/get-started?industry=real-estate&utm_source=realtor_landing&utm_medium=site_cta`

On mobile, retain the existing menu behavior. The booking CTA must remain visually primary and must not be buried inside the menu.

Section 2 — Hero: Realtor-Specific, Product-Visible, and Immediately Relevant

Purpose

A visitor should understand three things immediately: Graylock makes websites specifically useful for real estate businesses; the finished product looks premium on desktop and mobile; and booking a call is the low-risk next step.

Layout

Use a desktop hero minimum height of **760px** and a maximum height of **860px**, excluding the navigation. The hero must use the supplied `hero_bg_willow_realty.png` as a full-bleed background asset. Preserve the image's open dark left side for the copy block and the device mockup on the right.

Do not add a second laptop mockup, do not re-render the asset inside a card, and do not cover the device screens with an overlay. The left copy area may have a subtle left-to-right black gradient only if it is needed for contrast; keep it at or below `rgba(0,0,0,0.18)` so the existing asset remains visually clean.

Desktop content container: maximum width `1280px` ; left text column `min(52%, 620px)` ; left alignment; vertical centering at approximately 48% of hero height. The right visual must remain uncovered.

Copy

Eyebrow

CUSTOM WEBSITES FOR REAL ESTATE PROFESSIONALS

H1

YOUR NEXT CLIENT IS SEARCHING.

MAKE SURE THEY FIND YOU.

Style “MAKE SURE THEY FIND YOU.” in Graylock orange. Keep the two-line treatment on desktop. On mobile, use a controlled three-line wrap if necessary; never reduce the headline below a readable, confident size merely to force two lines.

Supporting copy

We build custom real estate websites that earn trust fast, showcase your market, and turn property searches into buyer and seller conversations.

Primary CTA

Book a Realtor Website Call

Destination: `/get-started?industry=real-estate&utm_source=realtor_landing&utm_medium=hero_cta`

Microcopy below CTA

See a custom homepage direction for your brand before you spend a dollar.

Hero proof row

Use four equally weighted proof items below the hero copy. On desktop, display in one row; on mobile, use a two-by-two grid. Each item uses the existing orange-check or orange-icon treatment.

Proof item	Exact label
1	Built to earn buyer and seller trust
2	IDX property search when eligible
3	Turn search traffic into conversations
4	MLS setup guidance from start to launch

Mobile behavior

Do **not** use a normal `background-size: cover` crop for the 16:9 asset on a narrow mobile hero; it will either hide the device screens or make them too small to matter. Instead, use a two-part mobile hero:

1. Place the text block first on the existing black/topo background at the top of the section.
2. Render `hero_bg_willow_realty.png` below it in a dedicated media container with `object-fit: contain`, full width, `aspect-ratio: 16/9`, and no aggressive crop.

This preserves legibility, keeps the example real estate website visible, and prevents the mobile experience from becoming a dark hero with no product proof.

Section 3 — Credibility: Why Website Design Matters in Real Estate

Retain the existing visual statistic component and the current underlying citations already used on the homepage. Change the audience framing and explanatory copy as follows.

Eyebrow

FIRST IMPRESSIONS DECIDE THE NEXT STEP

H2

BUYERS AND SELLERS DECIDE WHETHER YOU FEEL CREDIBLE BEFORE THEY CONTACT YOU.

Body copy

Before a buyer schedules a showing or a seller requests a valuation, they are deciding whether your brand feels established, local, and worth trusting. Your website has to make that decision easier—not create another reason to keep searching.

Retain the existing three statistical cards, citations, animation behavior, and typography. Replace any generic service-business supporting labels with these:

Metric	Supporting label
50ms	To form a first impression of your website
75%	Judge a business’ s credibility by design
94%	Of negative website feedback relates to design

The implementation must retain the original source/citation UI already used on the homepage. Do not add unverified real estate statistics to this section.

Section 4 — The Problem With Most Real Estate Websites

Section header

Eyebrow

THE PROBLEM WITH MOST AGENT WEBSITES

H2

YOU’ VE BUILT A REPUTATION. YOUR WEBSITE SHOULD HELP PROVE IT.

Body copy

You know your market, your inventory, and the people you serve. But if your site looks generic, hides your value, or makes listings hard to explore, the next conversation goes to an agent whose website feels easier to trust.

Pain-point cards

Keep the current three-card structure, image-first layout, hover behavior, card dimensions, and mobile stacking. Replace the current images with real-estate-specific visuals before launch; do not reuse generic office, laptop, or contractor imagery.

Card	Card title	Exact body copy	Image direction
1	YOUR WEBSITE DOESN’ T MATCH THE LEVEL OF HOMES YOU REPRESENT.	A generic template can make a strong brand, polished listings, and years of local expertise feel interchangeable.	Premium architectural/interior scene paired with a dated, generic real-estate-site contrast; elegant, not stocky.
2	BUYERS AND SELLERS CAN’ T SEE A CLEAR NEXT STEP.	If a visitor cannot quickly search homes, request a valuation, or contact you, they move on to someone whose site makes the decision easier.	Conceptual route/decision image or refined property-search interaction— never a person staring at a laptop.
3	YOUR SITE ISN’ T TURNING ATTENTION INTO CONVERSATIONS.	Search traffic, listing views, and social clicks do not matter if your website gives visitors no compelling reason to reach out.	Subtle visual metaphor for buyer/seller lead flow or a premium website inquiry interaction.

Do not overlay long text onto the card images. All copy must remain in the card content area for accessibility and mobile legibility.

Section 5 — What We Build for Real Estate Professionals

Section header

Eyebrow

WHAT WE DELIVER

H2

A REAL ESTATE WEBSITE THAT DOES MORE THAN LOOK THE PART.

Body copy

One custom website—built to show up locally, make your expertise obvious, keep buyers exploring, and give sellers a clear reason to start the conversation with you.

Use the current split layout: real estate device image on one side and four feature blocks on the other. Use the same `hero_bg_willow_realty.png` asset or a future neutral real-estate device mockup only if the current asset is too visually repetitive. Do not use the unrelated optometry, cabinetmaking, or generic service-business device assets.

Feature	Exact copy
A BRAND THAT LOOKS ESTABLISHED	Custom positioning, premium visual hierarchy, reviews, credentials, and local proof points make your first impression match the level of service you provide.
PROPERTY SEARCH THAT KEEPS LEADS ON YOUR SITE	When your MLS and brokerage eligibility allow it, we integrate IDX search so buyers can explore available homes without immediately leaving your brand experience.
BUYER AND SELLER PATHS THAT MAKE SENSE	Search homes, request a valuation, schedule a consultation, or contact your team—each audience gets a clear, low-friction next step.
LOCAL VISIBILITY BUILT INTO THE FOUNDATION	We structure the site around the areas, communities, services, and questions that matter to the people looking for real estate help in your market.

Section 6 — IDX and MLS Approval Guidance

This is a **new section**. It is the major real-estate differentiator and must appear after “What We Build” and before the demo-first process.

Purpose

Communicate capability without overselling, reduce anxiety around technical setup, and explain that Graylock will guide the project through the website and coordination side while the local MLS retains final authority.

Layout

Use a dark full-width section with orange accents. Place a compact process diagram or four numbered cards below the copy. Do not make this section feel like API documentation. It should feel calm, clear, and handled.

Eyebrow

IDX + MLS INTEGRATION, MADE CLEARER

H2

PROPERTY SEARCH SHOULD HELP YOU KEEP THE CONVERSATION.

Body copy

An IDX-enabled property search can turn your website into more than an online brochure. When your MLS and brokerage eligibility allow it, we connect the right search experience to your site and help you work through the local MLS setup steps without making you figure out the website side alone.

Required reassurance statement

You stay in control of your MLS relationship. We handle the website work, coordinate the technical requirements, and help you move through the approval process with a clear checklist.

Four-step IDX / MLS support sequence

Step	Title	Exact copy
1	CONFIRM YOUR MARKET + MLS	We identify your market, brokerage details, local MLS, and the property-search experience you want buyers to have.
2	CHOOSE THE RIGHT IDX PATH	We confirm the supported integration approach, required access, expected data fields, and the details your MLS or provider needs.

3	BUILD + TEST THE SEARCH EXPERIENCE	We connect the approved search solution, format listing pages to match your brand, and test the buyer journey across desktop and mobile.
4	SUPPORT THE APPROVAL HANDOFF	We provide the website information and technical coordination needed for your local MLS review, then address website-side revisions if they are requested.

Required fine print below the four steps

IDX availability, required agreements, disclosures, data fields, approval procedures, and third-party fees vary by MLS and provider. Final data access and approval remain subject to your MLS, brokerage, and data-license requirements.

Implementation constraints

The build must treat the IDX provider as a configurable integration, not hard-code a single vendor. Use a content/config field for `idx_provider`, `mls_name`, `mls_market`, `idx_status`, and `idx_disclosure_html`. Do not put MLS credentials in client-side code or in a public repository. No data feed or property-search interface should launch until the client's required agreement and approval path are confirmed. 1 2

Section 7 — The Demo-First Process, Adapted for Realtors

Section header

Eyebrow

SEE THE DIRECTION BEFORE YOU COMMIT

H2

YOUR REAL ESTATE WEBSITE SHOULD NOT BE A GUESS.

Body copy

We do the strategic work first so you can see the direction, understand the process, and make a confident decision before you pay for a full build.

Use the existing process-card styling, but expand from four to **five** steps. Use real estate-specific images or clean editorial graphics; do not use the generic existing process images if

they mention unrelated service businesses.

Step	Title	Exact copy
1	15-MINUTE STRATEGY CALL	We learn your market, your current website frustrations, your ideal clients, and whether you need property-search functionality.
2	FREE CUSTOM HOMEPAGE DEMO	We create a real homepage direction for your brand—built around the way you want buyers and sellers to experience you online.
3	YOU APPROVE THE DIRECTION	If the strategy and design feel right, you green-light the full build. If not, there is no obligation to move forward.
4	BUILD YOUR LEAD ENGINE	We build the site structure, local pages, buyer and seller paths, contact flows, and approved IDX experience where applicable.
5	LAUNCH WITH A CLEAR HANDOFF	After content, required approvals, and testing are complete, we launch on your domain and stay on to maintain the site.

Timing rule: Keep the current “7–10 business days” promise only for the core website build after all required inputs, content, and any third-party IDX/MLS approvals are available. Never imply that Graylock controls an MLS review timeline.

Section 8 — Proof Bridge Now; Real Estate Testimonial Later

The current petroleum testimonial is not appropriate on a realtor-specific page because it makes the page feel adapted rather than specialized. Build the testimonial component now, but do **not** publish a fabricated review, invented performance number, or placeholder quotation marks.

Temporary version until the testimonial is provided

Eyebrow

SEE WHAT A BETTER FIRST IMPRESSION LOOKS LIKE

H2

A REAL ESTATE WEBSITE SHOULD MAKE YOU EASIER TO CHOOSE.

Body copy

From first search to first conversation, your site should make it easy for a buyer or seller to understand your value, explore their options, and take the next step with confidence.

CTA

View Our Portfolio

Destination: `/featured-projects`

Replace with this component once the approved real estate testimonial is supplied

Use the real client's exact quote, full name, brokerage/team name, local market, portrait or website image, and written permission status. The visual structure should match the existing homepage testimonial section, with the realtor website screenshot or an approved client photo on the left and the quotation on the right.

Do not publish this component until all fields are real and approved.

Section 9 — Why Graylock: Real Estate Website Comparison

Section header

Eyebrow

WHY GRAYLOCK

H2

A LOWER-RISK WAY TO BUILD A WEBSITE THAT EARNS ITS KEEP.

Body copy

Most real estate website options give you a rigid template, a long contract, or a site that looks like every other agent in town. Graylock starts with a custom direction and builds around how your market actually chooses an agent.

Keep the existing two-column comparison pattern and “Recommended” badge on Graylock. Replace all current generic language with the following.

Traditional templates and agencies	Graylock Digital
Start with a prebuilt real estate theme shared by countless agents	Start with a custom homepage direction shaped around your brand, market, and lead goals
Make you commit before you have seen the actual direction	Show you a real custom homepage demo before you pay
Treat property search as an afterthought or an opaque add-on	Plan IDX/MLS readiness early and guide the website-side setup when eligible
Make buyers and sellers dig for a useful next step	Build clear paths for search, valuation, consultation, and contact
Launch a site and leave you to maintain it	Keep the site supported, maintained, and refreshed while subscribed

Traditional side: “Upfront Cost & Risk”

Pay upfront for a template or agency process before you know whether the website will feel like your brand.

Graylock side: “Upfront Cost & Risk”

\$0 to see your custom demo. You approve the direction before the build fee is due.

Do not quote or compare third-party IDX setup fees in this section. Those vary by local MLS, provider, and client eligibility.

Section 10 — Pricing Bridge

Retain the current published pricing component, current plan details, and current pricing-page link. Do not create a separate unapproved realtor price list.

Eyebrow

SIMPLE PRICING. A CLEARER PATH.

H2

YOUR NEXT CLIENT IS NOT WAITING FOR A BETTER WEBSITE.

Body copy

Start with a free custom homepage demo built around your real estate brand. When you approve the direction, we build the site, support it, and keep it current—without locking

you into a long-term contract.

Primary CTA

Book a Realtor Website Call

Destination: `/get-started?industry=real-estate&utm_source=realtor_landing&utm_medium=pricing_cta`

Secondary CTA

See Full Pricing

Destination: `/pricing`

Required note below pricing copy

IDX, MLS data, and third-party provider costs—if applicable—are scoped separately after your market and eligibility requirements are confirmed.

Section 11 — Closing CTA

Use the current final CTA structure with the following copy.

Eyebrow

READY WHEN YOU ARE

H2

LET' S BUILD THE WEBSITE YOUR NEXT CLIENT CAN TRUST.

Body copy

Book a quick call. Tell us what is working, what is not, and what you want your website to do for your business. We will make the path forward clear—and show you a custom direction before you have to commit.

Primary CTA

Book a Realtor Website Call

Destination: `/get-started?industry=real-estate&utm_source=realtor_landing&utm_medium=final_cta`

Reassurance line

No pressure. No generic template. No obligation to move forward after your demo.

Section 12 — Realtor FAQ

Place the FAQ after the closing CTA or immediately before the footer, using the existing accordion component. Use accessible buttons with `aria-expanded` , visible keyboard focus,

and server-rendered FAQ content.

Question	Answer
Do you build real estate websites with IDX property search?	Yes. When your MLS, brokerage, and selected provider allow it, we can integrate an IDX property-search experience into your custom website. We plan the search experience around your market and your buyer journey instead of treating it like a disconnected widget.
Will you help with MLS approval?	Yes. We help organize the website-side requirements, provide the technical details your MLS or provider needs, and support the handoff process. Your MLS, brokerage, and data provider control final eligibility, agreements, and approval.
Can you work with my existing IDX provider?	In many cases, yes. We will review your existing provider, local MLS requirements, available integration options, and the user experience before confirming the build approach.
What does the MLS setup process usually involve?	It typically starts with confirming your MLS and brokerage eligibility, completing any required data-use or provider agreements, receiving approved credentials or an embed/API method, and then testing the property-search experience and required disclosures. Exact steps vary by market.
How long does a real estate website take to build?	The core Graylock website build is typically completed in 7–10 business days after the strategy, design direction, content, and required third-party approvals are ready. MLS and provider review timelines vary and are outside Graylock’s control.
Can the website help generate seller leads too?	Yes. We can create dedicated seller paths such as valuation requests, listing consultations, neighborhood pages, local proof, and clear contact actions—built around the conversation you want to start.
Do I own my website and domain?	Your website launches on your own domain. Graylock provides the ongoing hosting, maintenance, and support model described

in the selected plan. Use the final contract language as the controlling source for ownership and subscription terms.

5. Realtor Discovery Form Enhancements

The landing-page CTAs should route to the existing `/get-started` experience with the `industry=real-estate` parameter. On page load, read this parameter and display a small form-context line above the form:

You’ re booking a Realtor Website Call. We’ ll come prepared to talk about your market, your website, and property-search needs.

Add the following fields to the form when `industry=real-estate` is present. Preserve all current form validation, spam protection, accessible labels, and successful-submission behavior.

Field	Type	Required	Validation / behavior
Name	Text	Yes	Existing validation.
Email	Email	Yes	Existing validation.
Phone	Tel	Yes	Existing validation.
Brokerage or Team Name	Text	Yes	Trim and require at least two non-space characters.
Website URL	URL	No	Validate URL format if populated.
Primary Market / Service Area	Text	Yes	Example placeholder: <code>Twin Falls, ID / Magic Valley</code> .
Local MLS	Text	No	Example placeholder: <code>e.g., Intermountain MLS</code> .
Do you need IDX property search?	Select	Yes	Options: <code>Yes</code> , <code>No</code> , <code>Not sure yet</code> .
What do you want the new website to do better?	Textarea	No	Prompt: <code>Attract more buyers, generate seller leads, show listings, strengthen credibility, or something else?</code>

Hidden form values must include `industry=real-estate` , the landing-page pathname, all UTM parameters, and a timestamp. The submission notification or CRM payload should clearly label the lead as **Realtor Landing Page**.

6. Visual Direction and Responsive Behavior

Design direction

The page must inherit the current Graylock system: near-black foundation, charcoal topographic texture, white typography, Graylock orange for emphasis, strong condensed display headings, clean modern body text, sharp rectangular/low-radius buttons, and cinematic device imagery. The real estate differentiator is not pastel luxury branding; it is a premium, clear, high-trust digital presence for agents who want to be memorable in their market.

Do not introduce bright lime-green into the Graylock page simply because it appears on the Willow reference screens. Lime belongs inside the screen mockups as part of the portfolio-style proof; the landing page itself remains strictly Graylock black, white, charcoal, and orange.

Responsive requirements

Area	Desktop behavior	Mobile behavior
Header	Preserve current nav and right-side booking CTA.	Keep CTA visible; menu may collapse, but booking action cannot disappear.
Hero	Copy left; device image right; minimum 760px.	Text block first, dedicated full-width device media below it; no destructive background crop.
Hero proof row	One horizontal row of four proof points.	Two-by-two grid with equal spacing and no tiny type.
Problem and feature cards	Three-across cards or existing desktop layout.	Single column; image first, heading second, body third.
IDX process	Four steps in a horizontal process or two-by-two grid.	Four stacked cards with visible step numbers and no horizontal scroll.

Comparison table	Two columns, clear visual separator, Graylock marked Recommended.	Stacked comparison cards: traditional first, Graylock second.
FAQ	Full-width accordion.	Same accordion behavior; tap targets minimum 44px high.
Form	Existing layout.	All fields full-width; required fields and errors visible without horizontal scroll.

All layouts must preserve WCAG 2.1 AA color contrast, visible focus states, semantic heading order, alt text, labeled form controls, reduced-motion support, and no content hidden behind decorative imagery.

7. SEO, Metadata, Schema, and Analytics

Metadata

Element	Required value
URL	https://graylockdigital.com/websites-for-realtors
Title tag	` IDX Real Estate Websites for Agents & Teams
Meta description	Custom real estate websites with IDX property search, local MLS approval guidance, and lead-generation strategy for agents, teams, and brokerages.
H1	Your Next Client Is Searching. Make Sure They Find You.
Canonical	https://graylockdigital.com/websites-for-realtors
Open Graph title	Real Estate Websites That Turn Searches Into Conversations
Open Graph description	Use the meta description above.

Open Graph image	Use a 1200×630 crop of the selected Willow Realty device hero or a dedicated realtor landing-page social image. Do not use an unrelated generic Graylock graphic.
------------------	---

Schema

Retain the site-wide organization / professional-service schema already used by Graylock. Add page-level structured data only when content exists:

Schema type	Requirement
WebPage	Add with the page name, description, canonical URL, and main entity.
Service	Describe the service as Custom Real Estate Website Design offered by Graylock Digital. Do not claim Graylock is an MLS or data provider.
FAQPage	Add only if the exact FAQ questions and answers in this spec are rendered visibly on the page.
BreadcrumbList	Add Home → Real Estate Websites if the global site uses breadcrumbs elsewhere.

Analytics and monthly reporting hook

Preserve the existing site analytics baseline and add these events:

Event name	Trigger
realtor_landing_view	First page view of /websites-for-realtors .
realtor_hero_cta_click	Hero booking CTA click.
realtor_idx_section_view	IDX section reaches at least 50% viewport visibility.
realtor_process_cta_click	Any booking CTA inside or immediately after the process section.
realtor_portfolio_click	Portfolio CTA click from the proof bridge.

realtor_form_view	Realtor-context discovery form becomes visible.
realtor_form_submit	Successful realtor-context form submission.

Attach `industry=real-estate` , page path, referrer, UTM values, device class, and IDX-interest selection as event properties where privacy policy permits. Include the page in Graylock' s monthly reporting view with visits, CTA click-through, form submissions, qualified discovery calls, and form-reported IDX interest.

8. Assets, Content Dependencies, and Launch Checklist

Item	Status	Required action before publishing
hero_bg_willow_realty.png	Available	Upload to the site asset pipeline and use only in the realtor hero. Confirm Graylock has permission to display the Willow work as a portfolio example.
Real estate testimonial	Pending	Build the component but keep it unpublished until a true, approved testimonial with attribution is supplied.
Realtor-specific problem-card images	Required	Source or generate three conceptually distinct visual assets that map to the three pain points.
IDX provider / MLS configuration	Per prospect, not global	Do not hard-code vendor credentials. Create configuration placeholders and scope each client' s integration separately.
Legal and brokerage disclosures	Per prospect	Client supplies broker license, brokerage, MLS, fair-housing, equal-opportunity, and market-specific disclosure requirements where applicable.

Pricing language	Existing source of truth	Preserve current public plan copy; separately scope all outside IDX/MLS/provider costs.
------------------	--------------------------	---

Before publishing, test desktop, tablet, and mobile at standard breakpoints. Confirm that every CTA routes with the real-estate query parameter; that the hero visual remains visible on mobile; that no non-real-estate testimonials remain; that the page has a canonical URL; that FAQ schema matches visible FAQ content; and that the IDX section contains the required qualification note.

9. Implementation Do-Not-Do List

Do **not** make this page look like a generic luxury-real-estate template. Do **not** use a lime page palette, overly scripted headings, drone footage, or stock agents shaking hands as the primary visual language. The Willow design is evidence of Graylock’ s work, not the visual system for Graylock itself.

Do **not** promise property-search access before MLS eligibility is known. Do **not** state or imply that a client can display MLS data without the appropriate agreements, data license, credentials, and approval. Do **not** make the page’ s 7–10-day core build promise sound like a guarantee that an MLS will complete review within that time. 1 2

Do **not** use fake testimonials, invented client counts, false local-market claims, or generic “#1 Realtor website” language. The credibility of this page comes from the customized demo-first offer, the real visual example, clear process, and transparent IDX/MLS guidance.

10. Client Decisions Still Needed

The build agent can proceed without follow-up on the page architecture, copy, layout, and responsive behavior above. The following items are intentionally marked for Graylock to confirm before publishing:

Decision	Default assumption if not supplied
Final route	/websites-for-realtors
Target geography	Nationwide / local-market agnostic; no city-specific claims on this landing page

Approved use of REALTOR®	Use “real estate agents, teams, and brokerages” unless trademark eligibility is confirmed
Main IDX provider	Keep provider-agnostic and configurable
Public IDX pricing	Do not state any IDX fee; scope after market/provider requirements are confirmed
Real estate testimonial	Keep testimonial component unpublished until approved text and attribution arrive
Realtor portfolio permission	Verify permission to feature the Willow Realty screenshots in a sales landing page
Phone and booking destination	Use existing global phone number and /get-started route with industry=real-estate attribution

Build summary: Build a new /websites-for-realtors page that looks and behaves like Graylock’ s existing homepage, but speaks only to real estate agents, teams, and brokerages. Lead with the supplied Willow device visual, show the tangible outcomes of a real estate website, explain IDX/MLS support transparently, preserve the free custom-demo offer, remove irrelevant social proof, and route all conversions into a realtor-context discovery call.

Prepared for Graylock Digital’ s Replit implementation workflow. This is a scope and specification document; it does not authorize implementation beyond the stated landing page.
