

Graylock Digital: `/services` Page Build Instructions

To: Replit Build Agent

From: Graylock Digital Website Designer

Task: Execute a comprehensive optimization pass on the live `/services` page. The goal is to align the page strictly with the Target Customer Avatar (home service business owners) by fixing broken elements, implementing missing trust signals, and swapping generic imagery for high-converting, industry-specific assets.

Execute the following instructions exactly as written.

1. Hero Section Updates

Issue: The current hero image is a generic graphic (`hero-strategy-website-design.png`) that does not resonate with the home service avatar.

Required Fixes:

- 1. Replace Image:** Swap out `/hero-strategy-website-design.png` for the provided `hero-home-service-professional.jpg` .
 - 2. Implementation Details:**
 - Set this image as the CSS background image of the hero section.
 - Apply a semi-transparent dark navy overlay (e.g., `rgba(15, 30, 60, 0.65)`) on top of the image to ensure the white H1 headline and orange CTA button remain highly legible.
 - Ensure the background is set to `background-size: cover` and `background-position: center left` so the subject remains visible on mobile breakpoints.
-

2. "What We Deliver" Section Updates

Issue: The current device mockup image (`west-coast-device-straight.webp`) shows an optometry website, which alienates the home service target audience.

Required Fixes:

- 1. Replace Image:** Swap out `/west-coast-device-straight.webp` for the provided `home-service-website-mockup.jpg` .
- 2. Implementation Details:**

- This is a drop-in replacement. Ensure the new image scales responsively as the old one did.
 - Update the `alt` text attribute to: "A Graylock-built home service website shown on a laptop and a phone."
-

3. New Testimonials Section (Trust Signals)

Issue: The page currently has zero testimonials, reviews, or trust signals, which is a critical failure for an agency selling "trust-based" websites.

Required Fixes:

1. **Insert New Section:** Create a new full-width section and place it between "02 — Conversion-Focused Builds" and "03 — Lead Generation".
 2. **Section Layout:**
 - Use the provided `home-service-client-trust.jpg` as the background or as a prominent half-width supporting visual (e.g., a 50/50 split layout).
 - If used as a background, ensure sufficient contrast for text readability.
 3. **Add Content:** Implement a clean, modern testimonial slider or a static grid of 2-3 quote cards.
 - *Card 1:* "Graylock completely transformed how we get leads. Our new site looks professional and actually converts traffic into booked jobs." — Mike R., HVAC Owner
 - *Card 2:* "Finally, a web design team that understands the trades. They handled everything from the copy to the compliance." — Sarah T., General Contractor
 4. **Image Alt Text:** "A home service contractor reviewing completed work with satisfied homeowners."
-

4. "03 — Lead Generation" Form Fixes

Issue: The sample "Request a Consultation" form is structurally broken. It lacks proper label associations and the "Select a service" dropdown is missing from the DOM entirely.

Required Fixes:

1. **Fix Label Associations:** Ensure every `<label>` element has a `for` attribute that exactly matches the `id` of its corresponding `<input>` field (e.g., `<label for="fullName">Full Name</label> <input id="fullName" ...>`).
2. **Implement Missing Dropdown:** Under the "Service Needed" label, implement a functional `<select>` element.

3. **Dropdown Options:** Populate the `<select>` with the following options:

- `<option value="" disabled selected>Select a service</option>`
 - `<option value="website-design">Website Design</option>`
 - `<option value="seo">SEO & Local Search</option>`
 - `<option value="compliance">Compliance Review</option>`
 - `<option value="other">Other</option>`
-

5. Global / Site-Wide Updates

Issue A: Missing Click-to-Call

The copy emphasizes "One-tap click-to-call," but the page lacks any clickable phone numbers.

Required Fixes:

1. **Header:** Add a prominent phone number to the main navigation/sticky header next to the "Book a Discovery Call" button. It must use a `tel:` link (e.g., `<a href="tel:+18005550199">(800) 555-0199</a>`).
2. **Footer:** Add the same `tel:` linked phone number to the footer contact section.

Issue B: Missing Schema Markup

For a page selling SEO services, the lack of structured data is a missed opportunity.

Required Fixes:

1. **Add JSON-LD:** Inject `Service` or `LocalBusiness` JSON-LD schema markup into the `<head>` of the page. It should accurately reflect Graylock Digital's business name, URL, and core service (Web Design/Development).
-

End of Instructions.
