

Replit Replacement Brief — Realtor Landing Page IDX + MLS Section

Replace the Current Section Entirely

Remove the current section beginning with “**IDX + MLS Integration, Made Clearer**” and ending with the long qualification sentence below the four cards. The current version is technically cautious but emotionally flat: it makes an important advantage sound complicated, hides the Elm Street / IDX Broker partnership, and never gives the visitor a simple picture of what actually happens from kickoff to launch.

This replacement must make the process feel **handled, transparent, and fast**. The visitor should leave with one thought:

“They will take the technical IDX work off my plate, help me through the MLS process, and get my website live without making this a project I have to manage.”

Graylock is an **Elm Street IDX Broker Developer Partner**. Elm Street’ s official developer program positions IDX Broker as a flexible tool for MLS-data integration, customized search and listing experiences, and developer support; IDX Broker’ s own documentation confirms that account and integration work can begin while the local MLS approval process is still in progress. [1](#) [2](#)

1. New Section Structure

Use this exact hierarchy:

Order	Element	Required treatment
1	Eyebrow	Small uppercase Graylock orange text.
2	Headline	Large centered white display type, maximum two lines on desktop.
3	Supporting paragraph	Short, high-confidence explanation. Maximum three lines on desktop.
4	Partner/reassurance strip	Horizontal outlined band with a small shield/check icon; no large box or dense copy.

5	Five-step process	Five concise numbered cards connected by an orange progress line on desktop.
6	Timing statement	Strong 7–10 business-day core build target, followed by one transparent MLS timing qualifier.
7	Footer note	One sentence only; visually subdued but readable.

The entire section must be visually lighter and easier to scan than the current version. Remove the oversized brown reassurance box and the dense, paragraph-heavy four-card layout. The current section should be replaced—not edited in place.

2. Exact Customer-Facing Copy

Eyebrow

ELM STREET IDX BROKER + MLS INTEGRATION

Headline

FROM PROPERTY SEARCH TO LAUNCH,
WE MAKE IDX SIMPLE.

Style “**WE MAKE IDX SIMPLE.**” in Graylock orange.

Supporting Copy

As an Elm Street IDX Broker Developer Partner, we handle the website integration and guide you through the setup. IDX Broker helps coordinate the local MLS approval path while we build a custom real estate website that keeps listings, search, and lead capture working together.

Partner / Reassurance Strip

Use a compact horizontal strip directly below the supporting copy. Add a small orange shield-check icon on the left.

You handle the few details only you can. We handle the strategy, design, IDX

integration, testing, and launch.

Under the strip, add a small muted helper line:

Your local MLS or brokerage may ask you to complete market-specific paperwork or respond to an approval email. We will tell you exactly what is needed and keep the technical work moving.

3. Five-Step Process

Desktop layout

Use a connected five-step horizontal timeline. Place a thin dark-charcoal line across the upper third of the process grid, with a small Graylock-orange dot at each step. Each card begins with a large orange two-digit number (01 through 05). Do not use tall, uniform 260px cards full of paragraph text.

Recommended card layout:

- Card width: minmax(190px, 1fr) within a max-width: 1280px container.
- Card top padding: 30–36px.
- Card minimum height: 210px, maximum height: 250px.
- Background: near-black with a subtle 1px charcoal border.
- Number: 40–48px , condensed display font, orange.
- Title: white, uppercase, 16–18px , max three lines.
- Body: muted white/gray, 14–15px , maximum three short lines.
- Card hover: subtle upward translateY(-4px) , border moves toward dark orange, no glow effect.

Mobile layout

Stack the five cards vertically. Replace the horizontal line with a thin vertical orange line on the left connecting the step numbers. Keep each title/body left aligned. Do not attempt a five-column layout on tablet or mobile.

Exact step content

Step	Title	Body copy
01	START WITH YOUR MARKET + GOALS	We learn your market, brokerage, local MLS, and the

		buyer and seller experience you want your new website to create.
02	BEGIN IDX + MLS APPROVAL	We start your IDX Broker setup. Elm Street’s approval team helps move the local MLS process forward while we guide you through any required client steps.
03	BUILD YOUR SITE + INTEGRATE LISTINGS	While approval is underway, we build the complete custom site and connect branded property search, listing pages, and lead-capture paths.
04	COMPLETE MLS REVIEW + FINAL TESTING	Once the MLS requirements are ready, we submit the website details needed for any required review, test the search experience, and address website-side requests.
05	LAUNCH YOUR NEW REAL ESTATE WEBSITE	After required approvals and final testing are complete, we launch your site with live listings, clear buyer and seller paths, and a polished mobile experience.

Accuracy rule for Step 2

Do **not** say “Elm Street gets you approved.” The approved wording is **“Elm Street’s approval team helps move the local MLS process forward”** because final approval is controlled by the local MLS, the brokerage relationship, and any market-specific requirements.

Accuracy rule for Step 4

Use **“for any required review”** rather than claiming every MLS follows the exact same final-website review process. Some local MLSs may require website information, a live test environment, credentials, disclosures, or additional confirmation; requirements vary by market. [2](#) [3](#)

4. Timing Statement

Place this directly below the five process cards, centered, with the first sentence in white and the second sentence muted gray. Add a small orange clock icon or thin orange accent line—not a large badge.

Your custom site is typically designed, built, and ready for launch in 7–10 business days.

Local MLS approval timelines and client paperwork can vary by market, but we keep the website and IDX work moving while those steps are completed.

This is the only timeline language for the section. Do not claim that every IDX or MLS approval completes within 7–10 days. IDX Broker confirms that integration access can be available while MLS approval is still in progress, which is exactly why Graylock can build the site in parallel instead of waiting to begin. 2

5. Required Footer Note

Use this exact text in small, muted type beneath the timing statement:

IDX availability, approval requirements, disclosures, and third-party fees vary by local MLS, brokerage, and data provider. Final access remains subject to their requirements.

Keep the note in the page source as real text; do not render it inside an image or hide it behind an accordion.

6. Visual Direction

The current section feels like a technical explanation sitting inside a generic dark website. The replacement needs to feel like a **confident operational advantage**.

Use the Graylock design system only: deep black background, faint topo texture, white display text, muted gray body text, and orange for numbers, progress line, eyebrow, and the highlighted half of the headline. Do not borrow Elm Street’s lime-green palette for this section; Elm Street is the integration partner, while Graylock remains the visible brand.

A faint blueprint/grid or property-map contour pattern may appear behind the five cards at 4–6% opacity. Do not use stock images of agents, houses, laptops, handshakes, maps with pins, or generic software dashboards. The process itself is the visual subject.

The section should have approximately 112–136px vertical padding on desktop and 72–88px on mobile. Keep the centered heading and copy block to a maximum width of 900px.

7. Implementation Notes

Requirement	Instruction
Semantic structure	Use a <code><section></code> with one H2, then an ordered list <code></code> for the five process steps. Do not use non-semantic <code>div</code> cards only.
Accessibility	Step cards must be readable without hover. Preserve WCAG AA contrast, visible keyboard focus, and reduced-motion support.
Responsive behavior	Desktop five-column timeline; tablet grid with 2–3 columns; mobile vertical timeline. No horizontal scroll.
Partner name	Use “ Elm Street IDX Broker ” or “ Elm Street’s IDX Broker ” in body copy. Do not claim or display a logo badge unless Graylock has written permission to use Elm Street / IDX Broker branding.
Link behavior	If the phrase “Elm Street IDX Broker Developer Partner” is linked, open <code>https://elmstreet.com/developer-partners</code> in a new tab with <code>rel="noopener noreferrer"</code> . Linking is optional; do not make the section depend on it.
Disclosure	Keep the footer note visible at all sizes. Do not present legal or approval language only through a tooltip.
Analytics	Add <code>realtor_idx_process_view</code> when 50% of the section is visible and <code>realtor_idx_partner_link_click</code> only if the partner link is enabled.

8. Replit Build Instruction — Paste This Into the Build Task

Replace the existing “IDX + MLS Integration, Made Clearer” section on `/websites-for-realtors` with the five-step Graylock / Elm Street IDX Broker process in the attached spec. Do not preserve the existing four-card layout, long reassurance box, or “Property Search Should Help You Keep the Conversation” heading. Build a new semantic `<section>` with

the eyebrow **ELM STREET IDX BROKER + MLS INTEGRATION**, the headline **FROM PROPERTY SEARCH TO LAUNCH, WE MAKE IDX SIMPLE**. (make the second line orange), the provided supporting copy, compact reassurance strip, five-step ordered process, timing statement, and visible footer note exactly as written. Use a five-column connected timeline on desktop, an adaptive grid on tablet, and a vertical line timeline on mobile. Follow the current Graylock black/topo/orange visual system; do not use Elm Street lime green or generic real-estate stock photos. The section must communicate that Graylock is an Elm Street IDX Broker Developer Partner, builds the site and IDX experience while approval is underway, guides the client through required MLS steps, and launches after required approvals and testing are complete. Do not promise MLS approval or state that the 7–10 business-day core build timeframe controls local MLS review timing.
