

Graylock Digital — Well Driller Landing Page

Sales-Enabled Replit Build Specification and Copy Deck

Recommended route: /websites-for-well-drillers

Primary conversion: Check Market Availability / Book a Discovery Call

Primary audience: Owner-operators, family-owned well-drilling companies, pump-service businesses, irrigation-well contractors, rural-water specialists, and commercial or agricultural drilling contractors with an established local service area.

Primary purpose: Give a well driller who received a Graylock cold call a credible, specific explanation of why Graylock contacted them, what the market-specific offer is, how the website will generate service and estimate requests, and what happens next.

Offer model: Graylock is selecting one qualified well driller in targeted local markets and waiving the one-time website build fee for that selected business. The selected business still receives the existing monthly plan, 30-day money-back guarantee, and two-year website refresh while subscribed, subject to the current terms shown on Graylock’s pricing and guarantee pages.

Core positioning: Graylock does not build generic websites for well drillers. Graylock builds custom local lead-generation systems designed to help a well-drilling company show up when the market searches, look stronger than local competitors, and turn service and estimate requests into direct email notifications.

1. Scope Guardrails and Build Intent

Build this as a **new campaign landing page**. Do not alter the existing Graylock homepage, global pricing page, global process page, or general service-business messaging. The page should inherit the current Graylock design system, navigation shell, contact behavior, CTA styling, footer, guarantee language, and mobile-first quality standard, but it must read as though it was written only for well drillers.

The page is not a generic “contractor websites” page. Avoid broad, interchangeable phrases such as “grow your business online,” “stand out in a crowded market,” or “service businesses like yours.” Use language well drillers recognize: drilling jobs, pump service, water systems, rural properties, agricultural or commercial work, service areas, emergency calls, estimate requests, and crews in the field.

The message must mirror the sales team’s outreach precisely:

“We are not blasting every well driller in the country. We reached out because we see a business we believe we can help. In selected markets, we are choosing one qualified well-drilling company and waiving the build fee to build the strongest lead-generating website in that local market.”

This statement should make the recipient feel selected—not pressured. It must not promise permanent market exclusivity, first-page Google rankings, a certain lead volume, or guaranteed revenue.

2. Required Asset and Page-Level Positioning

Hero asset

Use the completed Rosenlund Drilling device hero asset:

Asset	Required use	Placement and treatment
	Primary well-driller hero background	Use as the full-bleed desktop hero image. It includes a dark open left side for headline copy and desktop/mobile examples of a premium well-drilling website on the right. Do not place a second device mockup, overlay card, or gradient over the device screens.

The visual demonstrates the standard of website Graylock can build for a well driller. Before public launch, confirm that Graylock has permission to show Rosenlund Drilling as a portfolio-style example on this campaign page.

Core page promise

The page should repeatedly communicate four outcomes:

Outcome	What the visitor should understand
Be found locally	The website is structured around the drilling, pump, water-system, and service-area searches that matter in the client’s market.
Win the comparison	A polished, clear, mobile-first website makes the company look more established and

	easier to trust than a local competitor with an outdated or confusing site.
Turn traffic into requests	Purpose-built service and estimate paths move a prospect toward a real inquiry instead of a dead-end visit.
Make the process easy	Graylock handles the strategy, design, build, launch, support, and maintenance path while the well driller stays focused on the field and their customers.

3. Sales-Enabled Personalization Rules

The sales team will be sending this link after outbound calls. Implement lightweight query-parameter personalization so the page continues the exact conversation without becoming fragile or showing fake information.

Supported campaign parameters

Parameter	Example	Use on page
market	Elko, NV	Insert into the market-availability line and the form context.
rep	Tim	Optional. Use in the booking form hidden fields and internal notification only. Do not place a sales rep's name into public hero copy unless Graylock explicitly wants it.
source	cold_call	Internal attribution only.
utm_source	outbound	Preserve for attribution.
utm_campaign	well_driller_market_offer	Preserve for attribution.

Dynamic market line

Place this line beneath the hero supporting copy and above the primary CTA.

When a valid `market` parameter is present:

CURRENTLY EVALUATING ONE QUALIFIED WELL DRILLER IN [MARKET].

Fallback when no market parameter is present:

CURRENTLY EVALUATING ONE QUALIFIED WELL DRILLER PER SELECTED MARKET.

Style this as a small, uppercase, orange-accented availability line with a subtle map-pin or target icon. Do not style it as an urgent countdown, do not show a fabricated number of spots, and do not say “exclusive” unless Graylock has established a real written exclusivity policy.

Sales-link example

Plain Text

<https://graylockdigital.com/websites-for-well-drillers?market=Elko%2C%20NV&rep=>

All parameters must be captured as hidden fields on the discovery form and attached to the internal lead notification / CRM payload.

4. Homepage Baseline: What to Keep, Change, Remove, and Add

The current Graylock homepage has a strong conversion sequence: pain-led hero, credibility proof, problem cards, delivery features, demo-first process, social proof, comparison, pricing, and closing CTA. 1 Reuse the sequence, component quality, button behavior, dark topo visual system, and conversion rhythm. Replace the audience language and re-order select blocks to foreground the market-specific waived-build-fee offer.

Current homepage element	Action	Well-driller implementation
Global header and logo	Keep	Preserve the existing navigation and <code>Call Now</code> link. Change primary header CTA label only on this page to Check My Market .
Generic service-business hero	Replace	Use the well-driller hero copy and <code>hero_bg_rosenlund_drilling.png</code> .
Hero proof row	Replace	Use well-driller outcomes: local visibility, direct request

		notifications, mobile-first trust, and ongoing support.
General design-statistics section	Keep, but reposition	Keep the component only if it remains concise. Reframe it around the fact that a property owner or ranch manager judges a contractor before making a high-stakes water-system call.
Generic problem cards	Replace	Use three well-driller pain points: difficult to find locally, an outdated site that does not reflect capability, and no direct request path.
Generic “What We Deliver” feature grid	Replace	Build the lead-system explanation: service-area SEO, request capture, real proof, and mobile performance.
Demo-first process	Keep concept; replace details	Use the five-step “market offer” process.
Existing non-well-drilling testimonial	Remove	Do not use unrelated petroleum or generic client reviews here. Build a proof bridge pending a real well-driller testimonial.
Traditional vs. Graylock comparison	Keep concept; rewrite	Compare generic template sites and conventional agencies with Graylock’s custom, market-aware lead system.
Pricing section	Keep structure; clarify offer	Preserve the current published monthly plan and guarantee terms; place the waived-build-fee offer above it.
Closing CTA	Replace copy	Emphasize the market check, no-pressure discovery call, and custom homepage direction.
FAQ	Add	Address market availability, build-fee waiver, lead delivery, local SEO, timeline, and guarantee.

5. Information Architecture

Use the following order. The page should be long enough to answer the questions a skeptical owner has after a cold call, but it must remain easy to scan on a phone in the cab, shop, or jobsite.

Order	Section	Job to be done
1	Global header	Keep phone and market-check action visible.
2	Hero: why we reached out	Explain selection, outcome, and build-fee-waived offer immediately.
3	“Why Graylock contacted you”	Make the outreach feel researched and respectful, not mass-market.
4	Credibility / first impression	Explain why an underperforming website loses drilling and pump jobs.
5	Three well-driller website problems	Name the practical gaps in outdated websites.
6	Lead-generation system	Explain how the finished website helps generate and route real requests.
7	Market offer	Make the waived build fee, monthly plan, guarantee, and refresh easy to understand.
8	Five-step process	Explain the simple path from discovery call to launch.
9	Proof bridge / future testimonial	Show relevant project proof without inventing social proof.
10	Comparison	Contrast Graylock with generic templates and slow agency builds.
11	Pricing bridge	Reinforce transparent monthly support and low risk.

12	FAQ	Resolve objections before the visitor leaves.
13	Closing CTA	Drive the market-availability check.
14	Footer	Preserve global footer, phone link, and legal links.

6. Section-by-Section Copy and Build Instructions

Section 1 — Global Header

Preserve the global Graylock header, current nav destinations, logo, phone behavior, and mobile menu. On this page only, replace the orange header button label with:

CHECK MY MARKET

Destination:

Plain Text

```
/get-started?industry=well-drilling&utm_source=well_driller_landing&utm_medium=
```

If a `market`, `rep`, `source`, or UTM parameter exists on the landing-page URL, preserve it when the visitor moves into the form destination.

Section 2 — Hero: “We Reached Out for a Reason”

Purpose

The hero must answer the recipient’s first question after a cold call: **“Why are these people contacting my company?”** It must clearly state that Graylock is evaluating one qualified well driller in their market, that Graylock saw a realistic opportunity to help, and that the selected business receives a waived build fee—not a vague “free website.”

Layout

Use `hero_bg_rosenlund_drilling.png` as the hero background. Maintain the left-copy/right-device composition contained in the asset. Minimum hero height: **760px** desktop. Recommended maximum: **860px**. Do not crop or obscure the right-side laptop and phone screens.

Content container: maximum width 1280px ; left copy column maximum 610px ; vertically center at approximately 48% of the hero. Keep a very light left-side black gradient only if required for text contrast, with maximum opacity `rgba(0, 0, 0, 0.18)` .

Exact copy

Eyebrow

WE REACHED OUT FOR A REASON

H1

YOUR NEXT WELL-DRILLING JOB
STARTS WITH A SEARCH.

Style “**STARTS WITH A SEARCH.**” in Graylock orange.

Supporting copy

We are selecting one qualified well driller in targeted markets to receive a custom, lead-generating website with the one-time build fee waived. Built to help you get found locally, outclass nearby competitors, and turn service or estimate requests into real conversations.

Dynamic market availability line

Use the exact dynamic rule in Section 3.

Primary CTA

CHECK MY MARKET AVAILABILITY

Destination:

Plain Text

/get-started?industry=well-drilling&utm_source=well_driller_landing&utm_medium=

Secondary text link

SEE HOW THE OFFER WORKS

Scroll destination: Market Offer section.

Reassurance line below CTAs

No obligation to move forward. We show you a custom homepage direction before you pay anything.

Hero proof row

Use four short proof items beneath the copy. On desktop, one horizontal row; on mobile, two-by-two grid.

Proof item	Exact label
1	Built for local search visibility
2	Service + estimate requests sent to your inbox
3	Designed to win the first impression on mobile
4	Free website refresh every two years while subscribed

Mobile behavior

Do not use `background-size: cover` on a narrow mobile screen; it will crop the device proof out of the asset. Use a two-part mobile hero:

1. Display the black/topo text area first, with the eyebrow, headline, supporting copy, availability line, CTAs, and proof grid.
2. Display the supplied hero image in a separate full-width media container below the text using `object-fit: contain` and `aspect-ratio: 16/9`.

The device visual must stay visible on mobile because it proves what Graylock can build for this specific industry.

Section 3 — Why Graylock Contacted This Business

This is a **new section** and should sit directly after the hero, before credibility statistics. It is the key sales-enablement addition that the general homepage does not have.

Layout

Use a centered, high-contrast message block on a near-black topo background. Place one orange vertical accent line beside the copy on desktop; place it above the copy on mobile. Keep this section compact: `88-104px` vertical padding desktop and `64-72px` mobile.

Eyebrow

WHY WE REACHED OUT

H2

WE DO NOT OFFER THIS TO EVERY WELL DRILLER.

Body copy

We look for established drilling companies with a real local reputation—and a website that is not yet doing the business justice. If we reached out, we see a clear opportunity to help you look stronger online, show up for more of the searches that matter, and make it easier for customers to request service.

Closing line, styled in white with the final phrase orange

This is not a recycled template offer. It is a chance to build the **strongest well-drilling website in your local market.**

Do not use a CTA in this section. The purpose is validation and context, not an immediate second close.

Section 4 — Why the Website Decides the Call

Retain the existing homepage’s visual-statistics component and source treatment if it is already approved and technically sound. Replace the generic section copy with the following.

Eyebrow

BEFORE THEY CALL, THEY COMPARE

H2

WHEN WATER IS THE PROBLEM, TRUST IS THE FIRST REQUIREMENT.

Body copy

A homeowner, ranch manager, or project lead is often searching because they need a real solution—not another contractor to sort through. Before they call, they compare who looks experienced, clear, local, and ready to help. Your website should make that choice easier.

Keep the existing statistic-card visuals and their original citations. Change the supporting labels to:

Metric	Label
50ms	To form a first impression of your website
75%	Judge a business’s credibility by its design

94%

Of negative website feedback is design-related

Do not add unverified well-drilling statistics or claims about emergency response outcomes.

Section 5 — The Problem With Most Well-Drilling Websites

Section header

Eyebrow

THE PROBLEM WITH MOST WELL-DRILLING WEBSITES

H2

YOUR CREW DOES SERIOUS WORK. YOUR WEBSITE SHOULD LOOK LIKE IT.

Body copy

Your customers are not looking for a polished slogan. They are looking for a company that looks equipped, credible, local, and easy to contact when they need drilling, pumps, water-system work, or an estimate. An outdated website makes the decision harder than it needs to be.

Three-card content

Keep the current three-card structure, image-first card treatment, and single-column mobile stack. Use industry-specific images that are clearly different from one another. Do not use a random stock person staring at a laptop.

Card	Title	Exact body copy	Image direction
1	YOU ARE HARD TO FIND WHERE YOU ACTUALLY WORK.	If your website does not clearly connect your services to the towns, rural areas, and project types you serve, the next local search can go to a competitor instead.	Geographic service-area / rural terrain visual, subtle map or search context—not a generic pin-map illustration.
2	YOUR WEBSITE DOES NOT SHOW THE LEVEL OF WORK YOU DO.	Old templates and weak photos make a capable drilling company look smaller,	High-quality drilling rig, crew, water-system, or jobsite

		less experienced, or less prepared than it really is.	imagery that feels rugged and real.
3	INTEREST IS NOT BECOMING SERVICE REQUESTS.	A visitor may find you, look around, and leave without calling if the site does not make it simple to request service, ask for an estimate, or explain the problem they need solved.	Clear service-request / lead-flow metaphor or a refined phone/email request visual.

Section 6 — What We Build: A Lead-Generating System for Well Drillers

Section header

Eyebrow

WHAT WE BUILD

H2

NOT JUST A WEBSITE. A BETTER WAY TO WIN LOCAL JOBS.

Body copy

Your website should help you get found, earn the call, and route real service or estimate requests to the people who can act on them. That is the standard we build toward.

Use a split layout with a high-quality well-drilling website device mockup on one side and four feature blocks on the other. The Rosenlund hero asset may be reused only if it does not appear repetitive; a future neutral well-drilling device mockup is preferred for this section.

Feature	Exact copy
FOUND WHEN LOCAL CUSTOMERS SEARCH	We structure your site around the drilling, pump, water-system, and service-area searches that matter in your market—so the right people can find the right services at the right time.
BUILT TO TURN PROBLEMS INTO REQUESTS	Clear service paths, estimate-request forms, phone CTAs, and contact prompts guide

	visitors toward the next action instead of leaving them to figure it out.
LEADS DELIVERED WHERE YOU NEED THEM	Service and estimate requests are routed directly to your designated email inbox so your team can see new opportunities and respond quickly.
CREDIBILITY THAT HOLDS UP AGAINST COMPETITORS	Real work, clear capabilities, service areas, reviews, and trust signals are positioned where prospects make the decision to call—or keep looking.

Required implementation note

The build team must configure the actual well-driller client websites so that the primary form sends a clearly labeled email notification to the owner’s or office’s designated inbox. Each notification must include the prospect’s name, phone, email, service address or city when collected, requested service, message, page source, and timestamp. Do not claim “instant lead delivery” unless the final mail delivery configuration supports it; use “sent directly to your inbox.”

Section 7 — The Local Market Offer

This is a **new section** and must appear before the process section. It should make the value of the campaign offer unmistakable without sounding gimmicky or like an indefinite free website promotion.

Layout

Use a centered offer card on a dark background. The offer card should have a thin orange border, subtle topographic texture inside, no loud glowing effects, and an orange label at the top. On desktop, use a two-column interior: the offer explanation on the left and “what stays included” on the right. On mobile, stack in that order.

Offer label

MARKET BUILD-FEE WAIVER

H2

ONE QUALIFIED WELL DRILLER. ONE STRONGER DIGITAL PRESENCE.

Body copy

In selected markets, Graylock is waiving the one-time website build fee for one well-drilling company we believe we can genuinely help. You still get the same custom strategy, free homepage demo, monthly support, and lead-generation focus—without the large upfront website bill most agencies require.

Left-side “What is waived” content

Heading

WHAT THE MARKET OFFER CHANGES

The selected well driller does not pay the one-time build fee after approving the website direction. Instead, the business moves onto the published monthly plan after launch, with hosting, maintenance, support, and the planned refresh benefit included under the current plan terms.

Right-side “What stays included” content

Included item	Copy
FREE CUSTOM HOMEPAGE DEMO	See the direction built around your company before making a commitment.
30-DAY MONEY-BACK GUARANTEE	Keep the current Graylock guarantee exactly as defined in the live guarantee terms.
MONTH-TO-MONTH SUPPORT	Hosting, maintenance, and ongoing support stay simple and transparent.
FREE TWO-YEAR WEBSITE REFRESH	While subscribed, receive the existing two-year refresh benefit under the current plan terms.

Offer availability note

Availability depends on market fit, campaign capacity, and whether a local selection has already been made. Checking availability does not obligate you to move forward.

CTA

CHECK MY MARKET AVAILABILITY

Destination: Realtor-equivalent well-driller form URL with the preserved campaign parameters.

Offer language rules

Do not say “free website.” The accurate offer is “**one-time website build fee waived for the selected well driller.**” Do not state a build-fee dollar amount unless Graylock has an approved, current amount for the campaign. Do not claim there is a guaranteed exclusivity period. Do not hide the recurring monthly plan behind vague language.

Section 8 — The Simple Five-Step Process

Section header

Eyebrow

HOW IT WORKS

H2

YOU KEEP RUNNING THE CREW. WE HANDLE THE WEBSITE.

Body copy

No drawn-out agency process. No generic theme dropped on your business. We make the direction clear, build the site around your market, and launch a system designed to bring the right requests to your team.

Use a five-step connected process with the current Graylock dark/orange visual system. On desktop, show five horizontal cards or a connected timeline; on mobile, stack the cards with a vertical orange progress line.

Step	Title	Exact copy
01	15-MINUTE DISCOVERY CALL	We learn what you do, where you work, what your current site is missing, and what kinds of jobs you want more of.
02	FREE CUSTOM HOMEPAGE DEMO	We create a real homepage direction for your business so you can see how your company could look online before you spend a dollar.
03	YOU APPROVE THE DIRECTION	If the design and strategy feel right, you approve the direction. If not, there is no pressure and no obligation to continue.

04	WE BUILD YOUR LEAD SYSTEM	We build the pages, service paths, area coverage, request forms, local visibility foundation, and mobile experience around your actual business.
05	WE LAUNCH + KEEP IT CURRENT	We launch on your domain, route requests to your inbox, maintain the site, and refresh it every two years while you remain subscribed.

Timing statement below the process

Most core website builds are designed, built, and ready to launch in 7–10 business days once the direction, needed materials, and approvals are ready.

Real-world inputs such as client content, third-party services, or domain access can affect timing. Graylock will keep the path clear and moving.

Section 9 — Relevant Proof Bridge Until a Well-Driller Testimonial Exists

Do not use the existing petroleum testimonial or invent a well-drilling review. Build the testimonial component now but keep it unpublished until a real, approved well-driller testimonial is available.

Temporary proof bridge

Eyebrow

SEE THE STANDARD

H2

THIS IS WHAT A WELL-DRILLING WEBSITE CAN LOOK LIKE.

Body copy

A serious website should make your company's capability obvious in seconds—on a desktop in the office and on the phone a customer uses in the field. It should show the work, explain the services, and make the next step simple.

Display an approved Rosenlund Drilling website preview or another approved well-drilling portfolio image. The preview must link to the project case study or portfolio page if one

exists.

CTA

VIEW MORE OF OUR WORK

Destination: /featured-projects

Replacement testimonial component when approved

Use only a real testimonial with the full quote, owner name, company name, market, role, website screenshot or portrait, and written permission. Do not add lead numbers, revenue figures, or rankings unless the client has explicitly approved substantiation and attribution.

Section 10 — Why Graylock: The Comparison

Eyebrow

WHY GRAYLOCK

H2

A BETTER WEBSITE SHOULD NOT FEEL LIKE A BIGGER GAMBLE.

Body copy

Most website options leave a well driller with a template that looks like everyone else, an expensive upfront commitment, or a site that goes stale the moment it launches. Graylock starts with a real direction and builds around the way local customers actually choose who to call.

Use the existing comparison pattern with Graylock marked **Recommended**. The table must stack clearly on mobile.

Generic templates and traditional agencies	Graylock Digital
Start with the same contractor theme used in dozens of other markets	Start with a custom homepage direction built around your company, services, and service area
Ask for a large upfront payment before you see the actual direction	Show you a free custom demo before you decide to move forward
Make you manage the copy, structure, and website decisions alone	Guide the strategy and build process from first call through launch
Give visitors a generic contact page and hope they call	Build clear service and estimate-request paths that route leads to your inbox

Launch once, then leave the site to age

Maintain the site and provide the current two-year refresh benefit while subscribed

Traditional side: “Upfront Cost & Risk”

A large payment before you know whether the site will feel like your business—or help your business.

Graylock side: “Upfront Cost & Risk”

\$0 to see your custom homepage direction. If selected for the market offer, the one-time build fee is waived after you approve the direction.

Section 11 — Pricing Bridge and Risk Reversal

Retain the existing public pricing component and current live pricing details. Do not create a separate unapproved price list for well drillers.

Eyebrow

BUILT TO BE A BETTER BUSINESS DECISION

H2

A WEBSITE THAT HELPS CREATE JOBS SHOULD NOT CREATE A HUGE UPFRONT BILL.

Body copy

Start with a free custom homepage demo. If your business is selected for the market offer, the one-time build fee is waived. After launch, you are on a clear monthly plan that includes the support required to keep the website current and working for your business.

Primary CTA

CHECK MY MARKET AVAILABILITY

Secondary CTA

SEE FULL PRICING

Destination: </pricing>

Required guarantee line

Covered by Graylock’s current 30-day money-back guarantee. Your website also receives the current free two-year refresh benefit while subscribed.

Use the published guarantee / pricing terms as the source of truth. Do not paraphrase or

expand the guarantee beyond those terms.

Section 12 — FAQ

Place the FAQ after the pricing bridge and before the closing CTA. Use the existing accordion component with semantic buttons, `aria-expanded`, keyboard navigation, visible focus states, and real server-rendered text.

Question	Answer
Why did Graylock reach out to my well-drilling company?	We look for established companies with real local capability and a website we believe can be made significantly more effective. If we contacted you, we see a possible opportunity to help you look stronger online, get found locally, and turn more visitors into service or estimate requests.
What does “one well driller per market” mean?	In selected markets, Graylock is evaluating one qualified well-drilling company for the build-fee-waived offer. Availability depends on the market, campaign capacity, and fit. Checking availability does not create an obligation or promise permanent exclusivity.
Is the website actually custom?	Yes. We create a custom homepage direction around your company, services, service area, and ideal jobs. We do not hand you a generic contractor theme and ask you to make it fit.
Will the site help customers find us on Google?	We build the site around clear services, service areas, technical SEO fundamentals, local relevance, and content structure so search engines and customers can understand what you do and where you work. No agency can ethically guarantee a specific Google ranking.
How do leads get to us?	Service and estimate-request forms are configured to send the inquiry details to your designated email inbox. We also make call and contact actions clear throughout the site so customers can reach the right person quickly.
How fast can you build a well-drilling website?	Most core builds are ready in 7–10 business days after the strategy, design direction,

	required content, domain access, and any third-party requirements are ready.
Do we have to pay a large amount upfront?	You see a free custom homepage demo before deciding whether to move forward. If selected for the current market offer, the one-time build fee is waived; the ongoing monthly plan and all terms are shown clearly before launch.
What happens after the site launches?	Graylock continues hosting, maintenance, support, and the current two-year refresh benefit while you are subscribed, under the published plan terms.

Section 13 — Closing CTA

Use a full-width, focused closing section. Do not add a second large device mockup here.

Eyebrow

READY TO SEE WHAT YOUR MARKET IS MISSING?

H2

LET' S BUILD THE WEBSITE YOUR NEXT CUSTOMER FEELS GOOD ABOUT CALLING.

Body copy

Tell us where you work, what jobs you want more of, and what your current website is not doing. We will tell you whether your market is available and show you a custom homepage direction before you have to commit.

Primary CTA

CHECK MY MARKET AVAILABILITY

Destination:

Plain Text

/get-started?industry=well-drilling&utm_source=well_driller_landing&utm_medium=

Reassurance line

No pressure. No recycled template. No obligation after your demo.

7. Well-Driller Discovery Form Requirements

All campaign CTAs must route to the existing `/get-started` form with `industry=well-drilling`. On page load, read the industry parameter and show this context block above the form:

You are checking the Well Driller Market Offer. Tell us a little about your business and we will confirm availability, learn what jobs you want more of, and prepare for a useful first conversation.

Required form fields

Field	Type	Required	Validation and behavior
Name	Text	Yes	Existing required-field pattern.
Business Name	Text	Yes	Minimum two non-space characters.
Email	Email	Yes	Existing email validation.
Phone	Tel	Yes	Existing phone validation.
Current Website	URL	No	Validate only when populated.
Primary Service Area	Text	Yes	Placeholder: e.g., Elko County, NV and surrounding rural areas .
Main Services	Checkbox group	Yes	Options: Well Drilling , Well Pumps , Well Service / Repair , Water Systems , Agricultural / Irrigation , Commercial / Industrial , Other .
What kinds of jobs do you want more of?	Textarea	No	Placeholder: Service calls, new wells, pumps, commercial work, agricultural work, or something else.
Preferred Contact Method	Select	Yes	Options: Call , Text , Email .

Hidden fields

Capture `industry` , `market` , `rep` , `source` , `utm_source` , `utm_medium` , `utm_campaign` , landing-page path, referrer, and submission timestamp. The internal lead notification subject line should read:

New Well Driller Market Offer Request — [Business Name] — [Market]

The confirmation state must say:

You’ re in. We received your market check and will follow up with the next step shortly.

Do not promise a response time unless Graylock has an operational service-level commitment for campaign responses.

8. Visual Direction and Responsive Standards

Visual direction

The page must feel rugged, established, and premium—not “blue-collar template,” not an emergency-plumber landing page, and not an overly polished corporate site. The brand should communicate that Graylock respects the seriousness of the work while bringing a level of digital design most local competitors do not have.

Retain Graylock’ s dark black / charcoal / topo system, white display typography, and orange accent color. Use red only inside the Rosenlund website shown on the device screen; do not adopt red as the Graylock page palette. Use real drilling, rural-water, pump, and jobsite imagery only where it has a clear role. Avoid staged handshakes, generic hard-hat crews, fake emergency clocks, or stock photos of people merely pointing at screens.

Responsive behavior

Area	Desktop	Mobile
Header	Full global nav with <code>Check My Market</code> CTA visible.	Menu collapses, but CTA remains visible or immediately reachable.
Hero	Left copy, right device proof.	Text first; full-width contained device proof below.
Hero proof points	Horizontal four-item row.	Two-by-two grid.

Problem cards	Three columns.	One-card vertical stack.
Offer card	Two-column interior.	Stack explanation, inclusions, note, CTA.
Process	Five connected steps.	Five vertical steps with orange connector line.
Comparison	Two-column comparison.	Traditional first, Graylock second; no sideways scroll.
Form	Standard field layout.	All fields full-width with no compressed labels.
FAQ	Full-width accordion.	Same behavior with 44px minimum tap targets.

All page elements must maintain WCAG 2.1 AA contrast, semantic heading order, keyboard navigation, visible focus states, readable text on imagery, alt text, labeled form inputs, error messaging, and reduced-motion support.

9. SEO, Metadata, Schema, and Reporting Requirements

Metadata

Element	Required value
URL	<code>https://graylockdigital.com/websites-for-well-drillers</code>
Title tag	` Well Driller Websites That Generate Local Leads
Meta description	Custom well-drilling websites built to improve local visibility, route service and estimate requests to your inbox, and help you out-compete local alternatives.
H1	Your Next Well-Drilling Job Starts With a Search.
Canonical	<code>https://graylockdigital.com/websites-for-well-drillers</code>
Open Graph title	A Better Well-Drilling Website Starts Here
Open Graph description	Use the meta description above.

Open Graph image	Use a 1200×630 crop of the approved Rosenlund device hero or a dedicated well-driller campaign social image.
------------------	--

Schema

Retain the site-wide Graylock organization / professional-service schema. Add page-level structured data only where the visible page content supports it.

Schema type	Requirement
WebPage	Page name, description, canonical URL, and main entity.
Service	Custom Well Driller Website Design offered by Graylock Digital. Do not claim Graylock performs drilling or well service.
FAQPage	Add only if the exact visible FAQ content above is rendered on the page.
BreadcrumbList	Use Home → Well Driller Websites only if the page includes a visible or site-standard breadcrumb system.

Analytics and monthly reporting

Add the following events. Preserve the existing analytics solution and avoid collecting sensitive data beyond the campaign form fields.

Event	Trigger
well_driller_landing_view	First page view of /websites-for-well-drillers .
well_driller_market_availability_click	Any primary market-check CTA click.
well_driller_offer_view	Market-offer section becomes 50% visible.
well_driller_process_view	Five-step process becomes 50% visible.
well_driller_portfolio_click	Proof bridge portfolio click.
well_driller_form_view	Well-driller form context enters viewport.

well_driller_form_submit

Successful well-driller market-offer submission.

Attach market, rep, source, UTM values, device type, form service selections, and the landing-page path when allowed by the current privacy policy. Include this page in Graylock’ s monthly reporting: visits, market-check CTA click-through, submitted forms, booked calls, form-reported desired job types, and qualified market-offer selections.

10. Assets, Dependencies, and Pre-Launch Checklist

Item	Status	Required action before publishing
hero_bg_rosenlund_drilling.png	Available	Upload through the site asset pipeline; use only in the well-driller hero. Confirm display permission for portfolio use.
Well-driller problem-card imagery	Required	Source or generate three conceptually distinct, authentic industry images.
Well-driller testimonial	Pending	Build the component but do not publish until a genuine testimonial and attribution are approved.
Market-selection policy	Graylock decision required	Confirm which markets are open, how “one selected well driller” is tracked, and whether a market becomes unavailable after a selection.
Build-fee waiver terms	Graylock decision required	Confirm approved language and whether the waiver is documented in the client agreement.
Guarantee and refresh terms	Existing source of truth	Use the current public guarantee/pricing terms without expanding them.
Sales links	Required	Provide the sales team’ s standardized parameterized

URL format and track all outbound campaigns.

Required QA before publishing

Confirm that all market-aware hero text has a safe fallback when no `market` parameter exists; all CTAs preserve campaign parameters; no unrelated client testimonial remains; no page language promises Google rankings, lead volume, income, permanent exclusivity, or free unlimited work; mobile users can see the device proof; form notifications include the right campaign context; canonical and Open Graph metadata exist; and FAQ schema matches visible FAQ text exactly.

11. Replit Implementation Summary — Paste Into the Build Task

Build a new Graylock landing page at `/websites-for-well-drillers`. Do not change the global homepage. Reuse the current Graylock header, footer, button system, dark topo visual language, mobile-first behavior, pricing component, guarantee source of truth, and conversion architecture; replace all generic service-business content with the exact well-driller copy in the attached specification. This page is a sales-enabled follow-up destination for cold outreach. The central offer is that Graylock is evaluating one qualified well-drilling company in selected local markets and waiving the one-time website build fee for the selected business. Do not call this a “free website,” do not promise permanent market exclusivity, and do not promise rankings, lead volume, or revenue. Use `hero_bg_rosenlund_drilling.png` as the hero background. Preserve the asset’s open left side for copy and the laptop/phone website proof on the right. On mobile, render the hero text first and the device image as a separate contained media block below it so it stays visible. Add query-string personalization for `market`, `rep`, `source`, and UTM values. Use the dynamic market-availability line exactly as specified and preserve all values into `/get-started?industry=well-drilling` as hidden form fields. Configure the well-driller form fields, internal notification subject, success state, analytics events, accessibility requirements, SEO metadata, schema, and responsive behaviors exactly as stated in the specification.

12. Client Decisions Still Needed

The page architecture, copy, layout, and sales flow are ready for implementation. Confirm the following before publishing:

Decision	Default if not supplied
Final route	/websites-for-well-drillers
Open campaign markets	Use generic fallback wording; do not publish a specific market claim without a market parameter.
Selection policy after a market is filled	Remove market from sales campaign links or set a market-status flag that hides the active offer.
Public price on this page	Use the global current pricing component; do not invent a campaign-specific monthly price.
Guarantee terms	Use existing live guarantee terms exactly.
Portfolio permission	Confirm permission to display the Rosenlund website example.
Well-driller testimonial	Keep proof bridge live and testimonial unpublished until approved.
Internal email recipient	Configure in the existing form system / CRM, not in public frontend code.

[1] Graylock Digital Homepage — Current Conversion Architecture Baseline

Build summary: Build a dedicated well-driller campaign page that feels like the natural continuation of a good sales call. Make the recipient understand why Graylock chose to contact them, what the one-per-market build-fee-waiver offer means, how the website generates and routes real requests, why the process is low risk, and how to check their market availability. The goal is not merely to sell a website; it is to make the selected well driller believe that Graylock can help them own the stronger digital first impression in their local market.

Prepared for Graylock Digital’s Replit implementation workflow. This is a scope and specification document; it does not authorize implementation beyond the stated landing page.
